

Panel Study Sheet

Oct 6, 2026 · @Kirill Fuchs

Pitch: one cloud product for every customer, built with AI drafting and people signing; customers move one at a time, once every number matches to the cent. About 4M EUR; first customers month 5, 70% month 12, everyone month 18; pays back in year 4.

Four lines to repeat: one writer per customer's books · match to the cent before moving · roll back until the first cloud filing · AI drafts, tools check, people sign.

Numbers to know cold

- **Today:** 4,200 customers, each with its own database · 310 forks · 522K lines, no tests · 3.1M EUR a year · tax changes take 10–14 weeks
- **Plan:** week-8 gate · platform month 3 · first customers month 5 · all 9 modules month 9 · 2,970 (70.7%) month 12 · everyone month 18 · legacy off month 20
- **Money:** about 4M over two years (0.6M for the first 8 weeks) · 1.84M a year saved from year 3 · payback month 44, or 35 counting freed time
- **Per customer:** 738 → 330 EUR (target 406), 299 once legacy is off · **Tax changes:** 20 days at most · **Team:** about 30 for a year (model: 32), then 10

Say it first

- 70% has 30 customers of slack; a slip moves it month for month.
- Cash payback is year 4; the case is risk and speed, not just savings.
- The rounding gap is emulated; the harness confirms it in weeks 2–4.
- Rebuilding all 310 legacy forks by month 4 is the boldest promise; biggest forks first.

Hard questions

- **Monolith?** One posting is one transaction across four modules; we scale by cells.
- **Why not rehost?** It keeps 4,200 databases. **By module?** Two systems would write one ledger.
- **Platform in 3 months?** AI builds it fast; contracts and the security test set the pace.
- **Isolation?** Forced row-level security, tenant in every key, hourly cross-tenant probes.
- **AI on its own?** Drafts, flags, reports; never files, pays or touches a closed period.
- **Desktop loyalists?** Same keys; 90% of top workflows as fast before a module ships.

Don't: quote decimals · say "guaranteed" · recite gate codes · name the team's supplier · guess ("we confirm that at the week-8 gate").
